Summary

Software Developer with **3+ years of experience** specializing in **React Native and React.js**, building production mobile and web applications. Experienced in modernizing legacy systems, designing scalable UI architectures, API integration, performance optimization, and end-to-end mobile application delivery.

Experience

Software Developer

Drivex Mobility Pvt. Ltd.

Jul 2023 – Present

Bangalore

- Integrated **Pine Labs POS** machine into the application for in-app payment collection, implementing a **polling mechanism** to reliably track and confirm real-time transaction status
- Migrated legacy application architecture — including the existing **ProcX** codebase — into a unified **monorepo/shared codebase**, consolidating **InspectX** and **ProcX** with reusable features and minimal code duplication
- Engineered a **backend-driven dynamic rendering engine** that generates UI — including modals and form fields — directly from API responses, configuring field behavior (read-only, editable, mandatory), payload keys, and pre-submission validation calls, eliminating hardcoded screen logic
- Decomposed a monolithic legacy UI into **modular, independent sections** built from reusable components, replacing a single bulk API with **section-specific APIs** to enable independent data loading and improved scalability
- Built **InspectX**, a configurable mobile application delivering Inspection-as-a-Service, architected from the BikeScan codebase and customizable to diverse client requirements, accelerating delivery of a new product line
- Implemented **Detox** for end-to-end (E2E) testing of React Native applications, improving release confidence and reducing regressions
- Established **Fastlane CI/CD** pipelines with OTA updates, **RBAC for 500+ users**, device security checks, and automated testing using **Vitest + React Testing Library**, alongside migration to **NativeWind**
- Upgraded **React Native 0.74 → 0.84** and **React 18 → 19**, reducing app size from **25MB to 19MB** and improving performance by **40%** through Zustand, TanStack Query, and targeted rendering optimizations

[...more](#)

Achievements

- **End-to-End Inspection Digitization:** Replaced inspection processes previously dependent on Excel sheets with **100% digital workflows through BikeScan**, covering vehicle inspection, logistics pickup, technical store delivery, and receiving operations
- **Connected Vehicle Logistics Workflow:** Extended BikeScan across the complete vehicle journey — inspection and pickup by logistics, delivery to the technical store, security guard vehicle-received marking, refurbishment movement, and logistics drop-off tracking
- **Digital PRI Process:** Integrated refurbishment and technical-store workflows into BikeScan, enabling security teams to mark vehicle movement and store teams to complete **PRI inspection digitally** instead of relying on manual tracking

Skills

Frontend: React.js, React Native, JavaScript (ES6+), TypeScript, React 18/19, Material UI, NativeWind, Tailwind CSS

Architecture: Monorepo, Shared Codebase, Modular UI, Component Architecture, Configuration-Driven Development, Rendering Engine

State & Data: Zustand, TanStack Query, REST APIs

Mobile & DevOps: Android/iOS, Fastlane, OTA Updates, JailMonkey, App Signing, Provisioning, GitHub Actions, CI/CD

Testing & Backend: Detox, Vitest, React Testing Library, Node.js, Express.js, Spring Boot, JWT, MongoDB, MySQL, AWS EC2

Projects

- **Student Management API:** Developed a REST API using **Node.js, Express.js, and MongoDB** with **CRUD operations, JWT-based authentication**, token-based session management, and secure route protection; implemented **bcrypt password hashing** for secure credential storage
- **Music Streaming API:** Developed a REST API using **Spring Boot** with **CRUD operations, RBAC**, and admin controls; implemented database persistence using **JPA and Hibernate** with **MySQL**, deployed on **AWS EC2**
- **Restaurant Management API:** Built a REST API using **Spring Boot** with **RBAC**, menu/order management, and request validation; integrated **Swagger** for API documentation and testing

Education & Certifications

B.E. Information Science & Engineering — Brindavan College of Engineering (VTU), Bangalore

2018–2022

Certifications: Full Stack Development (Board Infinity) | React Native & React (Udemy)
